What's New in Sage 300 2023.0

Get increased flexibility and compatibility needed for today's business.

Sage

Sage 300 2023.0 offers exciting new features that guarantee better user experience, advanced capabilities and flexibility needed for today's business. The latest version presented additional functionality and superior user experience through web screens and financial reporter as well as important security updates.

Better User Experience	Advanced Capabilities & Flexibility
Greater productivity	Improved efficiency
Less training/retraining	Gain better business insight
Higher employee satisfaction	Less workarounds/manual process

What's new in 2023.0

Released September 2022

Complete web screens for GL, AP, AR, CS and AS

Web screens run parallel with desktop screens ensuring that there is no need choose between desktop or web. Everyone within the organization can use the interface that best suites their needs, while working seamlessly with a single shared set of company data.

Improved CRM integration

Users can now relink a CRM company to an unmatched Sage 300 record. The following A/R customer screens in CRM now uses the current date by default instead of the Sage 300 session date:

- Statistics – Fiscal Period and Fiscal Year fields
- Comments – Date Entered field
- Credit status – Age as of field

Security update

Users now have the option to require complex passwords that must include a lower-case letter, upper case letter, number, and a special character. Additionally, there have been technical upgrades and enhancements to improve overall security.

What's new in 2022.2

Released April 2022

Project and Job Costing integration for A/P Payments, A/P Adjustments and A/P Recurring Payments *(for Sage 300cloud only)*

Users can now enter and work with job-related documents on all A/P transaction entry screens. A/P Batch Listing Report now includes a 'Show Job Details' option for Batch Type: Invoice, Payment, and Adjustment. Users can apply payments to projects maintained in Sage 300 Project and Job Costing and allocate partial payments and/or recurring payments to different contracts and projects listed on the invoice.

Vendor tax numbers are now more secure

In Accounts Payable, Tax numbers for 1099 and T5018 Tax Reporting such as SIN (Social Insurance Number - CA) or SSN (Social Security Number - US) are now more secure.

- By default, tax numbers now cannot be entered or changed, and are masked so that only the last four characters in the number are displayed.
- Options for Printing and Electronic Filing for 1099/1096 forms and T5018 (CPRS) are not accessible by default.

Vendor tax numbers are now more secure

User passwords are now more secure. A new required complexity option requires that passwords include at least one of the following:

- Lower case letter
- Upper case letter
- Number
- Special character (such as * or #)
- Minimum length of 8 characters (required in addition to any one of the above)

Other Updates

- Accounts Payable now supports 1099 tax reporting requirements for tax year 2021.
- Email documents can now be sent using Microsoft 365.
- Test emails can now be sent using Microsoft Outlook. *(For Sage 300 only)*

What's new in 2022.1

Released November 2021

Project and Job Costing integration with AP Invoice

While creating an AP invoice, users can now use the new checkbox to make the invoice job-related. This option would change the grid from regular fields to job-related fields (Contracts, Project, Resource, etc.) that will ensure that once the invoice is created, the corresponding Project and Job Costing module is updated automatically.

UX improvements for Web screens

- New 'navigation' buttons on key fields that can be used to move to the first/previous/next/last records.
 - Record navigation - Record controls allow moving forward and backward one record at a time or through several records as in the desktop UI.
- Sign-on page significantly improved to be more consistent with the other Sage solutions:
 - Sign In button will be disabled while the company details get loaded
 - Spinner indicator will indicate slow network
 - Improved messaging for errors and password changes

Improved Process for Printing Custom Crystal Reports

The new printing process for web screens that was released with the Sage 300 2021 version is now extended to custom crystal reports that would result in less server crashes and improve overall performance during printing custom reports.

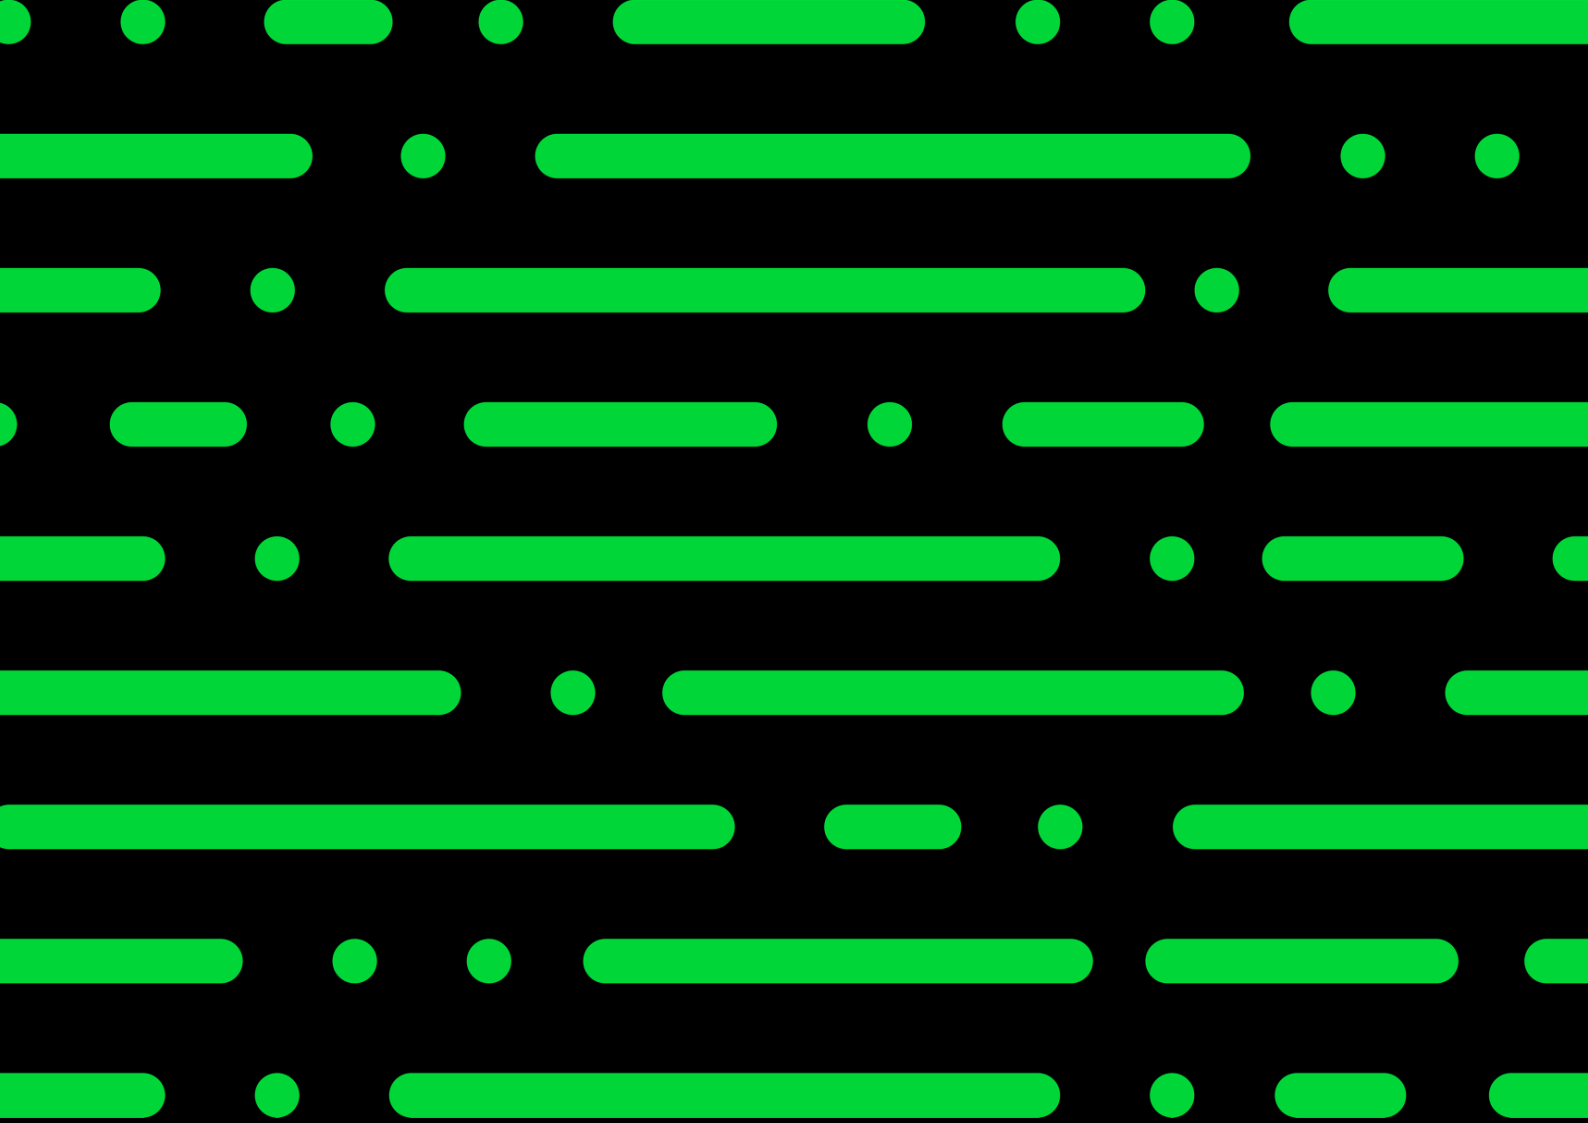

When printing a report, a preview of the report will no longer be displayed in the SAP Crystal Reports® viewer. Instead, the Export Report screen appears and provides options for saving the report to a file. To print a physical copy of the report, users will now have just save it to a PDF and print.

Web API improvements

Provide better error messaging so developers have a better understanding of what the error is. This would improve satisfaction of developers creating customizations and extensions with our ISV community.

Finder support for 64-bit Financial Reporter

Finders in Financial Reporter now work when using Microsoft Excel 64-bit.
